17 British Road, Bristol BS3 3BS

United Kingdom

“Be ambitious of climbing up to the difficult, in a manner inaccessible...”

We are an international team of researchers specialising in exploration and progression in the fields of virtual reality, data and artificial intelligence. Though it is early days for our company, a combination of commercial ventures, idealistic projects and state of the art services has already allowed Crocotta to gain respect in the tech-industry.

What we do

We solve problems where others cannot, and we do it with brilliantly elegant and powerful solutions.

Software research & development

Visual Computing | **Real-Time** Processing | **Big Data** | Machine Learning | Bioinformatics

Automation | **Prototyping**

Troubleshooting | Project Management | Consulting

Who we are

Robert Sugar

Visual computing and AI scientist, entrepreneur, and futurist

 uk.linkedin.com/in/robertsugar

Founder and CEO of Crocotta R&D

and his **international team of scientists, engineers, creatives and managers** *strengthened further by*

- *British academia; excellent links with limitless supplies of expertise and support*
 - *Strategic European partners*
 - *Visiting scientists*
-

How we stand out

High quality combined with high professionalism...

We make you stand out

- ➔ With **innovative solutions** from the very edge of technology
- ➔ By deploying **academic level expertise** to your business and processes
- ➔ Still **affordable and customisable** for medium and small enterprises

We get there first

- ➔ We are small, decentralised, therefore **mobile and fast moving**
-

Our clients

Public organisations like the **European Space Agency**.

Industry with **focus on medium and small enterprises**.

We are having clients in manufacturing, surveillance, media and the games industry.

Innovation is everywhere

We are living in a technological world. We are surrounded by innovation, creativity, and information. In the coming years everything will become digitally connected. Big Data is already huge and it is only getting bigger, it continuously keeps transforming the IT infrastructure. Modern technology is even changing the way our brains work, say neuroscientists.

Often businesses just tell us “they have it all covered”, and of course they are right, in a way, but technology is evolving rapidly, year by year ever efficient possibilities become available to replace earlier approaches, therefore we advise everyone to let us have another look at processes, data and infrastructure.

Just let us understand the way you operate and see how we can improve things for you.

- ➔ **Reduced costs**
- ➔ Further **increased efficiency**
- ➔ More **manual processes** become **automated**
- ➔ **Yet unexploited layers and context are hiding in your existing processes as well as data that could open up brand new opportunities for your business**

By Crocotta R&D, September 2015

Yours faithfully,

Robert Sugar
CEO of Crocotta R&D Limited
